

# WHAT IS OSB?

## AND WHY YOU DON'T WANT IT IN YOUR BUILDING

### OSB

stands for Oriented Strand Board, a manufactured wood product made with layers of pressed wood remnants

### MOISTURE

easily seeps into the pressed layers, causing warping and bending

### CRACKS

emerge from the moisture and warping, which compromises the building's integrity

### ALTERNATIVE

CDX is a more durable veneer plywood that repels moisture. Black Lake Buildings uses *only* CDX and no OSB.

### BLACK LAKE BUILDINGS

"Portable buildings you can be proud of."
